Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-9, drawn a signal processing method;

II. Claims 10-19 and 24-35, drawn to a detector that averages a sensor's

output, the degree of averaging being a function of the change in signal.

III. Claims 20-23 and 36-38, drawn to a computer program product which

detects how to change the sampling rate.

2. Inventions I and II are related as process and apparatus for its practice. The

inventions are distinct if it can be shown that either: (1) the process as claimed can be

practiced by another materially different apparatus or by hand, or (2) the apparatus as

claimed can be used to practice another and materially different process. (MPEP §

806.05(e)). In this case the process as claimed can be practiced by another materially

different apparatus, specifically one requiring means for establishing first and second

sampling rates and degrees of smoothing.

3. Inventions II and III are related as combination and subcombination. Inventions

in this relationship are distinct if it can be shown that (1) the combination as claimed

does not require the particulars of the subcombination as claimed for patentability, and

(2) that the subcombination has utility by itself or in other combinations (MPEP §

806.05(c)). In the instant case, the combination as claimed does not require the

particulars of the subcombination as claimed because "altering a sample rate

parameter" is not required in invention II. The subcombination has separate utility such

as conventional noise signal sampling.

Application/Control Number: 10/619,827 Page 3

Art Unit: 2857

4. Inventions I and III are related as process and apparatus for its practice. The

inventions are distinct if it can be shown that either: (1) the process as claimed can be

practiced by another materially different apparatus or by hand, or (2) the apparatus as

claimed can be used to practice another and materially different process. (MPEP §

806.05(e)). In this case the process as claimed can be practiced using another

materially different program product, specifically one requiring first and second sampling

rates and degrees of smoothing.

5. Invention II contains claims directed to the following patentably distinct species of

the claimed invention:

I. The species best illustrated by "averaging a sensor's output, the degree of

averaging being a function of the change in signal.

II. The species best illustrated by altering both the sample rate and the

number of samples including a timer.

Should Applicant elect invention II, Applicant should elect either species I or

species II.

Contact information

6. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Mohamed Charioui whose telephone number is (571)

272-2213. The examiner can normally be reached Monday through Friday, from 9 am

to 6 pm.

Analisation (Control Number on

Application/Control Number: 10/619,827

Art Unit: 2857

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Marc S Hoff can be reached on (571) 272-2216. The fax phone number for

the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
